

Spa Pool – Fresh Water Start Up

Auckland Town Supply

- Add 1 cup full of Calcium Hardener with filter running. Wait 10 minutes
- Add 1-1.5 cups of PH Buffer (Sodium Bicarbonate) with filter running. Wait 10 minutes
- Test pH and adjust as necessary using dessertspoon amounts of either pH Increase (raises pH) or pH Decrease (reduces pH) with filter running. Wait 10 minutes
- Add 2 teaspoons Spa Chlor or Dichlor (Sodium Dichloroisocyanurate) with filter running. Wait 10 minutes
- Add 5 Bromine Tablets to the floating dispenser in the spa pool

Weekly

- Test water balance and adjust where applicable i.e; Total Alkalinity, pH and Chlorine
- If pH is high, add pH Decrease
- If pH is low, add pH Increase
- If pH and Total Alkalinity are low, add Total Alkalinity

Fortnightly

- Check cartridge filter is clean if required
- Back wash and rinse filter and check pump basket for leaves

Every 6-8 Weeks

- Change the water (depending on use)
- Clean cartridge with cartridge cleaner (Pool & Spa Filter Cleaner)
