

## Winterising Treatment

Bacteria and algae can grow in pools over the winter, so it is essential to maintain a level of chlorine to prevent more growth and we recommend you take the following steps to keep your pool clean throughout the winter when not being used.

- Vacuum and brush the pool thoroughly
- Backwash the filter
- Check that the water is balanced and adjust if necessary
- Check that the chlorine level is between 1 and 1.5ppm and adjust if necessary
- Add Pool Kleer to extend the properties of the sanitiser. With the filter running add Pool Kleer direct to the water round the edges of the pool at the rate of 250mls per 4,500 litres (1,000 gals)

During winter, check the chlorine level once a week and adjust where necessary.

- Run the filter for 1 full day, once a week during winter
- Backwash filter before switching off
- Cover the pool to prevent leaves/debris build up in pool
- Prevent frost damage to pool and accessories
