

Chemical List and Purpose

Product	Purpose
Pool Chlorine Granules (Calcium Hypochlorite)	Cost effective, granulated swimming pool sanitiser. Pre-mixing required
Liquid Chlorine	Cost effective, liquid pool chlorine. Directly add to the water
Anti Chlor Trichlor Tablets (Trichloroisocyanuric Acid)	Chlorine Neutraliser - Sodium Thiosulphate A slow dissolving 200g tablet, for use in Inline Chlorinators/skimmer application/floating dispenser
Trimaxic Granules	Enhanced 6 way protection Chlorine Granules (Trichloroisocyanuric Acid & Sodium Tetraborate)
Chlorine Tablets (Calcium Hypochlorite)	A 20g pill for use in floating dispenser/skimmer application
Dichlor or Spa Chlor (Sodium Dichloroisocyanurate)	Fast dissolving stabilised granules, for use in pools & spas as a sanitising agent
Spa Brilliance	100% soluble, fast dissolving stabilised granules that are not susceptible to degradation by sunlight for use in spa pools. Can be spread over the surface of the spa.
Bromine Tablets (Brom-chloro-dimethyl hydantoin)	A 20g tablet used in a floating dispenser for as a spa sanitiser
Chlor Save (Cyanuric Acid)	A stabiliser used to slow the rate at which the free chlorine is destroyed/burned by the sunlight in a pool
Hydrochloric Acid	Lowers pH/Total Alkalinity in swimming pools
pH Increase (Soda Ash)	Increases H in both spas and pools
pH Decrease (Sodium Bisulphate)	Lowers pH in both spas and pools
PH Buffer (Sodium Bicarbonate)	Controls the changes in pH and raises the Total Alkalinity
Calcium Hardness (Calcium Chloride)	As pool water deprived of calcium becomes aggressive and etches pool surfaces, this is used to raise the water hardness level
Pool Algaecide	Controls algae growth in swimming pools
Multi Tablets (Trichloroisocyanuric Acid, Copper Sulphate, Aluminium Sulphate)	A 200g 4 way action tablet – contains a stabiliser to reduce chlorine degradation, flocculant to drop suspended particles, an algaecide to inhibit algae growth and a pool santiiser
Multi Pills	A 20g 4 way action tablet – contains a stabiliser to reduce chlorine degradation, flocculant to drop suspended particles, an algaecide to inhibit algae growth and a pool santiiser
H2 OK (Bromo-2-Nitropropane, Copper Sulphate)	Non-Chlorine treatment for both spas and swimming pools
O2 Shock (Potassium Peroxymonosulphate)	For use as a shock treatment in spas and swimming pools – Non-Chlorine

Velvet Touch (Boric Acid)	Water enhancer for spas providing a softer feeling to the water, also clarifies and gives protection against corrosion
Spa liquid Buffer (pH Lock) (Sodium Phosphate)	Prevents pH fluctuations in spa pools
Crystal Clear (Polydimethyldiallyl Ammonium Chloride)	Coagulates fine particles, enabling the filtration system to remove dirt and organic matter - gives sparkling water to both spas and swimming pools
Stain & Scale Control (Phosphonic Acid)	Prevents and controls stain and scale formation on pool surfaces, heaters and equipment
Pool & Spa Filter Cleaner (Alkaline Salts)	Concentrated cleaner for sand cartridges and filters
Liqua Floc (Polyaluminium Chloride)	A flocculent that makes suspended particles heavy and drops to the bottom of the pool for vacuuming to waste
Floc Aluminium	Removes finely suspended particles from cloudy water that the filter cannot normally clean (Aluminium Sulphate)
Winteriser	Long lasting winter solution for swimming pools. Provides an effective barrier against algae growth through pool hibernation. Lasts up to 5 months.
Super Algaecide	Used for pools containing heavy algae growth. Super Algaecide is a Non-Copper Algaecide.
Salte Algaecide	Non copper formulation making it ideal for pools with Salt cell chlorine generators. An independently strong formulation with a control period up to 2 months. Especially ideal as a shock or pool opening-up algaecide
